

RETROFIT

*3000 Series
Pulse Jet*

Let us convert those older maintenance prone Dustex fan pulse units over to efficient compressed air cleaning units.

This can prove to be a very cost saving conversion as you can re-use the existing hopper & support structure due to the 3000 Series pulse jet housing utilizing the same hopper/housing split bolt pattern as the model RA & 2300 fan pulse units.

By converting to pulse jet cleaning you will lose all of the "moving" damper parts & have one remote venturi wall on the new housing for cleaning. This allows us the opportunity to prepare a pulse jet conversion quote tailored specifically for your existing fan pulse unit.

All we need is the original serial number of the collector to get started.

When the dust settles ... the choice is clear
