

DUSTEX

CLEAN AIR TECHNOLOGIES

Aftermarket Products & Services

Dustex offers aftermarket parts, as well as maintenance and support services. We support all OEM's air pollution control equipment, not just for Dustex installations. Dustex recommends starting with an audit to assist in identifying any issues and/or potential for future issues. This will enable minimization of future costs and the ability to support compliance needs, as well as anticipate future concerns.

Replacement Parts & Fabrication

Supplying parts and accessories for all OEM systems is as simple as a phone call. Our professional and friendly customer service team will provide competitive pricing and delivery schedules to meet your needs. Dustex has the ability to ship many items for next day delivery, due to on-site warehouse stock of many standard parts.

These include the following (but not limited to):

Bags (all materials & sizes) | Cages | Leak Detection Powder | Precoat | Blowpipe | Tubes | Cartridge Filters | Diaphragm/Solenoid Valves and Repair Kits
Timer Boards | Door Gaskets | PLC System Components
Fans & Accessories | Instrumentation | Bulkhead Fittings

For a complete list please email parts@dustex.com or call 678.574.4535

Services

In Dustex's continued effort to identify you company's challenges and needs, we offer the following services:

- Bag and cage changeouts
- Comprehensive bag analysis
- Equipment audits (on-line and off-line)
- Repair services
- Operator training

Control Panels

Control panels and timer sequence panels are built, wired, and tested at Dustex's on-site facility. We can provide customers with around-the-clock troubleshooting and any electrical maintenance or spare parts needs.

Mission Statement

Dustex is a global supplier of engineered systems that reduce air emissions and improve operational efficiencies. We are at the forefront of engineered solutions for clean air technologies with an exceptional and experienced staff. Our outstanding service combined with our wide breadth of technology allows us to provide practical and economical engineered solutions for our customers that fit their unique needs.
