CLEAN AIR TECHNOLOGIES

## Preventative Maintenance Assessment Plan

A Dustex audit is a comprehensive evaluation of the air emissions control system and equipment conditions. This evaluation is the first critical step in determining the preventative maintenance plan. A Dustex audit can be completed on-line or off-line, customer preference.

### Benefits of a preventative maintenance plan include:

- Reduction of operational costs due to detailed audits, diagnostics, and monitoring of the system
- Less downtime because of proactive preventative maintenance and service
- Longevity of equipment by utilizing quality replacement parts
- Maximized productivity through comprehensive operator training

### Leading to...

- Increased efficiency
- Optimal performance

Dustex is trained and equipped to perform assessments on all air pollution control equipment. After completing an audit, Dustex will provide a comprehensive written service report to include any recommendations for reduction of operating cost, as well as a quarterly maintenance plan tailored for your company's specific need.

### Some of our solutions include:

- Changeout service
- Filter bag lab analysis
- Rebuilds and retrofits
- Air flow studies
